

Assignment No.13

Problem Statement : Write a program to implement MongoDB database connectivity with any front end language to implement Database navigation operations (add, delete, edit etc.)

Program :

```
package MongoDB;

import java.util.Scanner;
import com.mongodb.*;

public class MongoDB {

    public static void Stringdata(String data,DBCollection table) {

        DBCursor cursor=table.find();

        if(cursor.hasNext()) {

            while(cursor.hasNext()) {

                String Strdata=(String)cursor.next().get(data);

                if(data=="Name") {

                    System.out.print(data+" :"+Strdata+"\t\t\t");

                } else {System.out.print(data+" :"+Strdata+"\t");} }

                System.out.println(" ");

            } else {System.out.print("");}

        }

    public static void Intdata(String data,DBCollection table) {

        DBCursor cursor=table.find();

        if(cursor.hasNext()) {

            while(cursor.hasNext()) {

                int dataint=(Integer)cursor.next().get(data);

                System.out.print(data+" :"+dataint+"\t\t\t");

            }

            System.out.println(" ");

        } else {System.out.print("");}

    }

    public static void main(String[] args) throws Exception {

        MongoClient mongo=new MongoClient("localhost",27017);

        System.out.println("Connected to the database successfully");

    }

}
```

```

Scanner sc=new Scanner(System.in);
int n,age=0;
String name=" ",mobilen=" ",ans=" ",ans1=" "; do{
DB db=mongo.getDB("Info");
DBCcollection table=db.createCollection("Personal",null);
System.out.println("Enter the no of record you want to insert:");
n=sc.nextInt();
for(int i=1;i<=n;i++) {
    BasicDBObject info= new BasicDBObject(i);
    System.out.println("Enter Data"+(i));
    System.out.print("Enter name:");
    name=sc.next();
    info.put("Name",name);
    System.out.print("Enter age:");
    age=sc.nextInt();
    info.put("Age",age);
    System.out.print("Enter Mobile Number:");
    mobilen=sc.next();
    info.put("Mobile Number",mobilen);
    table.insert(info);}
System.out.println("Insert Operation");
Stringdata("Name", table);
Stringdata("Mobile Number", table);
Intdata("Age", table);
System.out.print("Enter the no of record you want to delete:");
n=sc.nextInt();
for(int i=1;i<=n;i++) {
    BasicDBObject info= new BasicDBObject(i);
    System.out.println("Enter Data"+(i));
    System.out.print("Enter name:");

```

```

        name=sc.next();
        info.put("Name",name);
        table.remove(info);
    }

    System.out.println("Delete Operation");
    Stringdata("Name", table);
    Stringdata("Mobile Number", table);
    Intdata("Age", table);
    System.out.println("Do yo want to drop database: ");
    ans=sc.next();
    if(ans.equals("y")||ans.equals("Y")){
        db.dropDatabase();
        System.out.println("Database Dropped ");
    }
    System.out.println("Do you want to continue:");
    ans1=sc.next();
    }while(ans1.equals("y")||ans1.equals("Y"));
}

}

```
