

Assignment No.6

Problem Statement : Named PL/SQL Block: PL/SQL Stored Procedure and Stored Function

Program :

```
SQL> create Table stu_marks(Name varchar(10),total_m number(5));
```

Table created.

```
SQL> create Table result1(roll number(3),Name varchar(10),class varchar(10));
```

Table created.

```
SQL> create procedure proc_grade1(rno number,name varchar,marks number)is class  
varchar(10);
```

```
2 begin  
3 if(marks <= 150 and marks>=99)then  
4 class := 'distinction';  
5 elsif(marks <= 98 and marks >= 90)then  
6 class := 'first';  
7 elsif(marks <= 89and marks >= 82) then  
8 class := 'higher second';  
9 end if;  
11 insert into stu_marks values( name , marks);  
12 insert into result1 values(rno ,name,class);  
13 end;  
14 /
```

Procedure created.

```
SQL> --calling procedure
```

```
SQL> exec proc_grade1(1,'sam',100);
```

PL/SQL procedure successfully completed.

```
SQL> select*from stu_marks;
```

Name	total_m
sam	100

```
sql> selecr*from result1;
```

roll	name	class
1	sam	distinction
